Heat Design Equipment is pleased to be the Exclusive North American Manufacturer of the Proteus static Hot Box. This system is the ideal way to reduce costs on small asphalt works. They allow you to buy materials in bulk, store them on-site or in your yard, then load out into your own vehicles as and when you need them and in the quantities, you need them. This means you can cut back on expensive trips sending multiple gangs to and from the asphalt plant, saving you time and money.

The range of static asphalt Hot Boxes now includes diesel and kerosene-fuelled asphalt containers as well as our traditional propane gas Hot Boxes.

The static Hot box is also a great addition to running a Asphalt Recycler Operation. With the addition of the Static Hot box it allows you to store larger quantities of asphalt for large utility cuts and pothole operations.
